

Data analyses – Working group

Wednesday 14.00 - 17.00 o'clock

PC Lab of the Graduate School (Leibnizstr. 1, Room 205)

During our research we collect data, try to structure information, and then we should analyse them. But what are the right methods and which possibilities do we have? GIS – Statistics – and what else?

This working group offers PhD students as well as Master students an opportunity to learn how to work with their collected data. From simple descriptive statistics to correspondence analyses. This includes data structuring as well as different methods of analyses. The participants can work with their own data and discuss their ideas and results with the other students. The meeting will be every second week, so that the participants in-between can process their own dates. Furthermore it is possible to discuss new methods and ways of dealing with the collected information.

Not more than 10 participants

First meeting November 20, 2013

Next dates:

December 4

December 18

January 8, 2014

January 22

February 5
